

Mind Space — App Flow & Navigation Map

Document 03 of 06 | Version 1.0 | PFE Project

Screens inventory

ID	Screen name	Type	One-line purpose
S0	Onboarding	Full-screen	3 swipeable slides. Shown on first launch only before auth.
S1	Auth	Full-screen	Sign in with Google OAuth or email magic link. No passwords.
S2	Home	Tab root	Ambient orb, greeting, open threads (Arc cards), start chat affordance.
S3	Chat	Full-screen modal	Streaming conversation with Sage. Sage is listening / Phase indicator.
S4	Post-Chat Reflection	Full-screen modal	Cascade-animated reflection card. EFT-layered emotion + question.
S5	History — Timeline	Tab root (default)	Reverse-chronological list of all reflections with emotion filter.
S6	History — Arcs	Tab sub-view	2-column grid of Arc cards. Segmented toggle with Timeline.
S7	Arc Detail	Pushed screen	Sessions list, emotional journey snake, generate insight CTA.
S8	Reflection Read-Only	Pushed screen	Past reflection opened from Timeline or Arc Detail. Read-only.
S9	Settings	Tab root	Account email, sign out, export JSON, delete account.
M1	Crisis Resources Card	Bottom sheet over S3	Calm resources card when safety classifier flags CRISIS.
M2	Add Past Chat Sheet	Bottom sheet over S7	Multi-select list of unassigned sessions to pull into this Arc.
M3	Edit Arc Bottom Sheet	Bottom sheet	Move a session to a different Arc or create a new Arc.

Navigation structure

Bottom navigation bar — 3 tabs:

- Home (tab 1, default) → S2
- History (tab 2) → S5 by default, segmented control toggles S5 ↔ S6

- Settings (tab 3) → S9

Chat (S3) and Reflection (S4) are full-screen modals — they slide up from the bottom and push aside the tab bar entirely. When a user is in these screens, the rest of the app disappears. This is deliberate.

Entry point decision tree

Condition	Destination
First ever launch, onboarding not seen	S0 (Onboarding) → S1 (Auth)
Onboarding seen, not signed in	S1 (Auth)
Signed in, onboarding complete	S2 (Home)
Auth token expired mid-session	S1 (Auth) with "Please sign in again" message
Account deleted	S1 (Auth) with "Your account has been deleted" toast

Core user journeys

Journey A — First-ever conversation

1. User opens app → sees S0 (Onboarding, 3 slides) → taps "Get started"
2. S1 (Auth) → Google sign-in → profile auto-created via Postgres trigger → S2 (Home, empty state)
3. User taps ambient orb or "Start a conversation" → S3 (Chat) slides up
4. Sage greets: "What's on your mind?" → User types → Sage streams reply
5. After 4+ user messages, "Wrap Up" pill appears top-right
6. User taps Wrap Up → [LOADING: "Sage is sitting with this..." 2–6s]
7. Backend: safety-check → end-chat → embed → assign-arc → new Arc created
8. S4 (Reflection) cascades in: emotion spirit → what Sage heard → question → "This started a new Arc: [Name]"
9. User taps "Save Reflection & Continue" → S2 (Home) updated with Arc card

Journey B — Returning to an existing Arc

10. S2 (Home) → user sees Arc card "The Job Hunt — 3 sessions — 2d ago"
11. User taps Arc card → S3 (Chat) opens with context-aware opener: "Last time, we sat with the fear of being seen. What's coming up today?"
12. Conversation flows → Wrap Up → S4 (Reflection) shows "This deepened your Arc: The Job Hunt (4 sessions)"
13. User closes reflection → S2 (Home) updated

Journey C — Generating an Arc insight

14. S6 (Arcs grid) → user taps "The Job Hunt" (5 sessions)
15. S7 (Arc Detail) → "Generate Arc Analysis" banner visible (5 sessions ≥ 3)
16. User taps banner → [LOADING: "Sage is reviewing this Arc..." 5–10s]
17. S7 updates with insight card: "Here's how this story moved" + how it evolved + pattern Sage noticed
18. User reads. Sees themselves. This is the wow moment.

Redirect logic

User action	Redirect
Sign in success	S2 (Home)
Sign out	S1 (Auth)
Onboarding last slide → Get started	S1 (Auth)
Chat ended via Wrap Up	S4 (Reflection) — do not return to Home yet
Reflection closed (Save & Continue)	S2 (Home) — skip S3; the chat is over
Tap Arc card in S6 Arcs grid	S7 (Arc Detail)
Tap reflection row in S5 Timeline	S8 (Reflection Read-Only)
Tap session row in S7 Arc Detail	S8 (Reflection Read-Only)
Network error during chat	Stay on S3 — soft banner "You're offline. Sage will reply when you're back."
Reflection generation fails	S4 with retry card: "Sage couldn't finish reflecting. [Try again] [Skip]"
Safety classifier fires CRISIS	Stay on S3 — M1 (Crisis Resources Card) slides up from bottom
Tap session arrow in Arc Detail	M3 (Edit Arc Bottom Sheet) slides up

Empty states

Screen	Empty state content
S2 Home	Ambient orb in neutral state. Greeting. "Tap to start your first conversation." No Arcs section visible.
S5 Timeline	Emotion spirit illustration curled up. "Your reflections will appear here."
S6 Arcs	Spirits drifting faded. "Arcs form when conversations cluster around a theme. Have a few chats and they will start to appear."
S7 Arc Detail (< 3 sessions)	"Sage needs at least 3 sessions in an Arc before generating an insight. You have [n]."

Screen	Empty state content
S7 Arc Detail (≥ 3 sessions)	"Generate Arc Analysis" banner is prominent, slightly animated — pulsing invitation.

Loading states

Action	Loading treatment
App launch	Splash with three spirits drifting (~1 second)
Sign in	Subtle progress bar across top of auth screen
Sage reply (streaming)	No spinner — streaming IS the loading state. Text appears token by token.
Wrap Up → reflection generation	Full-screen "Sage is sitting with this..." with spirit orb gently pulsing. 2–6 seconds.
Arc insight generation	"Sage is reviewing this Arc..." with dominant spirit of that Arc pulsing. 5–10 seconds.
Loading history list	Skeleton rows with shimmer animation. Never a centered spinner.

EFT processing stage — Sage behavior by stage

Stage	Arc label	Sessions	Sage behavior	Insight available?
Awareness	forming	1	Pure listening. Reflects surface emotion back. Does not probe or interpret.	No
Expression	venting	2–3	Listens harder. Normalizes. Identifies the emotion layer underneath the presented emotion.	No
Regulation	stabilizing	3–4	Introduces gentle pattern questions: "I've noticed..." Does not advise.	Yes (unlocks)
Reflection	processing	4–5	Reflects the pattern the user cannot see. Cross-arc context injected here.	Yes
Transformation	shifting	5+	Asks "what would you tell a friend?" type questions. Holds space for change.	Yes
Integration	integrating	6+	Archive prompt appears. "Does this chapter feel complete?"	Yes
